FARMARE — Partner Programme

Share our fees, verifiably. FARMARE is a market-neutral yield strategy — it collects the funding fee that leveraged traders pay, whichever way the market moves. Real backtest Oct 2023 → Jul 2026: $10,000 → ~$28,500 net of all fees, worst dip –0.6%; forward expectation ~26%/yr median. Every figure is generated by the system and committed to a public, tamper-evident git history: farmarecapital.com.

How the programme works

You introduce capital; the depositor is tagged with your partner code at their first deposit. From then on, **a share of FARMARE's own fees on that deposit is yours — for life of the capital, paid monthly in USDC.**

- The depositor pays **exactly the same fees either way** (10% of profits

above their high-water mark + 1%/yr). Your share comes out of ours, never on top.

- The split is **enforced by the smart contract**, with a hard-coded

ceiling: your accrual is visible on-chain in real time. No invoices, no chasing, no trust required.

- Payouts are automatic and monthly. If your contact withdraws, the

stream stops; while they stay, it compounds with their account.

The economics

Cumulative capital introduced	Your share of our fees
Base	**20%**
Over $250,000	**25%**
Over $1,000,000	**30%**

Worked example — you introduce $1,000,000 and the strategy runs near its historical pace: FARMARE's fees on that capital are roughly $35–40,000/yr → **your stream is roughly $10–12,000/yr, recurring**, rising as the account compounds. (Illustrative, based on backtested returns; a weak-funding year pays proportionally less. Nothing here is a promise.)

Why this beats a classic retrocession deal

A traditional introducer agreement is a letter and an annual argument. Here the split is written in the vault's code, capped in the vault's code, and every accrual is a public blockchain entry you can audit any day — the same radical transparency the fund itself runs on.

How to join

Apply at farmarecapital.com (Partner programme section) or write to **felix.digennaro@gmail.com**. Tell us who you are and the capital you can introduce; the operator replies personally.

The fine print

This programme rewards **lawful introductions** only. It is not an offer of securities and not investment advice; FARMARE is a high-risk strategy and is not capital-preservation. Where the distribution of investment products requires authorisation (e.g. to retail clients through regulated advisors), participation is limited accordingly — a bankable wrapper (AMC with ISIN) for regulated channels is on the roadmap and will carry the standard retrocession chain. Capacity is finite: partner allocations follow the same list order as deposits.
